

Global Sales & TSG team,

We have been working directly with multiple individuals in response to questions about our manufacturing operations due to COVID-19. Below is a status update as of 3/16 which you may share with installers, distributors, customers or other partners as needed:

All global Siemon Company manufacturing locations are currently operating at full capacity including our operation in China.

Our China factory was closed as part of a government-mandated shutdown in early February – following that shutdown we implemented a number of changes to maximize the safety of our team members and maintain continuity of operations for our customers (social distancing, staggering shifts, remote work when possible, no visitors, etc.). We are applying similar practices in each of our global manufacturing locations and other office locations.

Naturally, the effects of COVID-19 on individual communities are unique and highly dynamic. Our management team is meeting daily to review contingency planning to maximize best practices for our people and our customers as the situation unfolds.
