

What matters:  
Working together to help our  
communities get better faster.

# Supporting local response to the healthcare crisis

The COVID-19 crisis is placing unprecedented demands on healthcare organizations, driving a critical need to expand capacity for testing and patient care to address the global pandemic in local communities. We know healthcare organizations everywhere are racing to bring testing centers online, build field hospitals, convert available space and more. In this demanding time, expertise, responsiveness and capability are more important than ever.

Eaton is committed to meeting our healthcare customers' critical needs during this crisis. We remain dedicated to ensuring always-on power for essential electrical systems and data services and supporting healthcare capacity needs with on-time project construction. In fact, we recently partnered with electrical contractors and distributors to build two new field hospitals in Wuhan, China.

At a time when what matters most is the ability of our healthcare system to respond to the crisis at hand, we can help. To that end, we are committed to partnering with the healthcare industry, and the dedicated contractors, consultants and channel partners who support it, to respond to the challenge before us and deliver what's needed: expertise, response time and power management solutions.

## Application expertise

From temporary tent structures serving community testing to housing patients in newly retrofitted facilities, we're able to tailor our services to your unique project requirements. Eaton's engineering services team works with your facility operations team to provide:

- **Design services supporting temporary power applications** or modifying existing building distribution systems to ensure safety and reliability
- **Existing distribution systems inspections**, confirming whether existing equipment/systems can handle additional loads, re-balancing loads or adding capacity
- **24/7 engineering services** to support your testing, maintenance and repair needs
- **Switchgear modernization** to accommodate any necessary upgrades required to meet new system needs
- **Auto-transfer upgrades** or systems to support temporary hospital facility power
- **Arc flash hazard analysis** for safety considerations and compliance with NFPA-70E and OSHA

*Powering Business Worldwide*

## Rapid response and custom solutions available locally

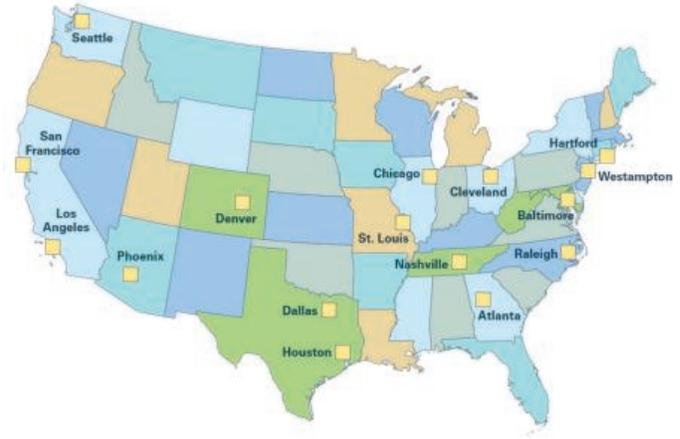

Whether you're establishing a 1,000-bed hospital or drive-in testing, we have local expertise available during this time of need to provide support. Our team members live and work within your communities and want to be part of the solution in this crisis. Our 16 regional manufacturing satellites provide rapid delivery, proven expertise and customized solutions for all critical application projects.

Our satellite offerings include:

- Switchboards and panelboards
- Enclosed circuit breakers
- Generator quick connects

In addition, Eaton provides a full array of power management solutions, including:

- Safety switches
- Wiring devices and wire management
- Busway
- Automatic transfer switches (ATS)
- Transformers
- Hospital room retrofit rough-in kits
- UPS, surge protection and power distribution strips (PDU)

## We're ready to help communities meet key challenges

Eaton is well-positioned to respond to our healthcare customers, thanks to our strong nationwide network of channel partners. Contact your local sales representative or Eaton channel partner to discuss how we can help.
